Computer Methods in Applied Mechanics and Engineering 111 (1994) 385–388
North-Holland

Subject index of Volume 111*

Boundary element methods
Stability assessment of a unified variational boundary integral method applicable to thin scatterers and scatterers with corners, X. Zeng and J. Bielak (3–4) 305–321
Efficient analytical integration of symmetric Galerkin boundary integrals over curved elements: Thermal conduction formulation, C. Balakrishna, L.J. Gray and J.H. Kane (3–4) 335–355

Conformal mapping
Unconditional stability and long-term behavior of transient algorithms for the incompressible Navier–Stokes and Euler equations, J.C. Simo and F. Armero (1–2) 111–154
An a posteriori error estimate for finite element approximations of the Navier–Stokes equations, J.T. Oden, W. Wu and M. Ainsworth (1–2) 185–202

Dynamics
Numerical analysis of large deformation rigid-plastic problems in dynamic range by quadratic extremum principles, A. Carini and O. De Donato (1–2) 61– 84

Finite difference methods
Recent developments in the algebraic multiblock method for Euler equations, A.E. Kanarachos, N.G. Pantelelis and C.G. Provatidis (3–4) 235–254

Finite element and matrix methods
Physical and computational aspects of chemically reacting hypersonic flows, J. Argyris, I.St. Doltsinis, H. Friz and J. Urban (1–2) 1– 35
Buckling of multilayered composite plates by natural shear deformation matrix theory, J. Argyris and L. Tenek (1–2) 37– 59
Unconditional stability and long-term behavior of transient algorithms for the incompressible Navier–Stokes and Euler equations, J.C. Simo and F. Armero (1–2) 111–154
Improving condensation methods for eigenvalue problems via Rayleigh functionals, K. Rothe and H. Voss (1–2) 169–183
An a posteriori error estimate for finite element approximations of the Navier–Stokes equations, J.T. Oden, W. Wu and M. Ainsworth (1–2) 185–202
Edges, stars, superedges and chains, R. Löhner (3–4) 255–263
Finite element methods for parabolized Navier–Stokes equations, Y. Bourgault, P. Caussignac and L. Renggli (3–4) 265–282
Efficient analytical integration of symmetric Galerkin boundary integrals over curved elements: Thermal conduction formulation, C. Balakrishna, L.J. Gray and J.H. Kane (3–4) 335–355
Optimal low order finite element methods for incompressible flow, D. Silvester (3–4) 357–368
A variational method for finite element stress recovery and error estimation, A. Tessler, H.R. Riggs and S.C. Macy (3–4) 369–382

* The issue number is given in front of the page numbers.

Fluid mechanics
Physical and computational aspects of chemically reacting hypersonic flows, J. Argyris, I.St. Doltsinis, H. Friz and J. Urban (1–2) 1– 35
Finite element methods for parabolized Navier–Stokes equations, Y. Bourgault, P. Caussignac and L. Renggli (3–4) 265–282
Optimal low order finite element methods for incompressible flow, D. Silvester (3–4) 357–368

Fracture mechanics
Studies on ceramic coatings. Deduction of mechanical and thermal properties from the microstructure of the material, J. Argyris, I.St. Doltsinis, M. Eggers and R. Handel (3–4) 203–234

Gas dynamics
Physical and computational aspects of chemically reacting hypersonic flows, J. Argyris, I.St. Doltsinis, H. Friz and J. Urban (1–2) 1– 35

General Rayleigh–Ritz and Galerkin techniques
A deterministic method to predict the effect of unknown-but-bounded elastic moduli on the buckling of composite structures, I. Elishakoff, Y.W. Li and J.H. Starnes, Jr. (1–2) 155–167
Improving condensation methods for eigenvalue problems via Rayleigh functionals, K. Rothe and H. Voss (1–2) 169–183

Incompressible and near incompressible media
Finite element methods for parabolized Navier–Stokes equations, Y. Bourgault, P. Caussignac and L. Renggli (3–4) 265–282
Optimal low order finite element methods for incompressible flow, D. Silvester (3–4) 357–368

Material physics
Studies on ceramic coatings. Deduction of mechanical and thermal properties from the microstructure of the material, J. Argyris, I.St. Doltsinis, M. Eggers and R. Handel (3–4) 203–234

Modern computer architecture
Edges, stars, superedges and chains, R. Löhner (3–4) 255–263
A fictitious domain method for Dirichlet problem and applications, R. Glowinski, T.-W. Pan and J. Periaux (3–4) 283–303

Nonlinear mechanics
Physical and computational aspects of chemically reacting hypersonic flows, J. Argyris, I.St. Doltsinis, H. Friz and J. Urban (1–2) 1– 35
Numerical analysis of large deformation rigid-plastic problems in dynamic range by quadratic extremum principles, A. Carini and O. De Donato (1–2) 61– 84

Numerical solution procedures
Improving condensation methods for eigenvalue problems via Rayleigh functionals, K. Rothe and H. Voss (1–2) 169–183
Recent developments in the algebraic multiblock method for Euler equations, A.E. Kanarachos, N.G. Pantelelis and C.G. Provatidis (3–4) 235–254
Edges, stars, superedges and chains, R. Löhner (3–4) 255–263
A fictitious domain method for Dirichlet problem and applications, R. Glowinski, T.-W. Pan and J. Periaux (3–4) 283–303

Stability assessment of a unified variational boundary integral method applicable to thin scatterers and scatterers with corners, X. Zeng and J. Bielak (3–4) 305–321
A new approach to minimising the frontwidth in finite element calculations, C.C. de Souza, R. Keunings, L.A. Wolsey and O. Zone (3–4) 323–334
A variational method for finite element stress recovery and error estimation, A. Tessler, H.R. Riggs and S.C. Macy (3–4) 369–382

Optimization and design of structures
A deterministic method to predict the effect of unknown-but-bounded elastic moduli on the buckling of composite structures, I. Elishakoff, Y.W. Li and J.H. Starnes, Jr. (1–2) 155–167

Phase changes
Physical and computational aspects of chemically reacting hypersonic flows, J. Argyris, I.St. Doltsinis, H. Friz and J. Urban (1–2) 1– 35

Plasticity
Numerical analysis of large deformation rigid-plastic problems in dynamic range by quadratic extremum principles, A. Carini and O. De Donato (1–2) 61– 84

Shells and plates
Buckling of multilayered composite plates by natural shear deformation matrix theory, J. Argyris and L. Tenek (1–2) 37– 59

Solution of integral equations (singularity method)
Stability assessment of a unified variational boundary integral method applicable to thin scatterers and scatterers with corners, X. Zeng and J. Bielak (3–4) 305–321
Efficient analytical integration of symmetric Galerkin boundary integrals over curved elements: Thermal conduction formulation, C. Balakrishna, L.J. Gray and J.H. Kane (3–4) 335–355

Solution of ordinary and partial differential equations
A fictitious domain method for Dirichlet problem and applications, R. Glowinski, T.-W. Pan and J. Periaux (3–4) 283–303

Stability in fluid mechanics
Numerical results and stability analysis for the computation of the transonic flow problems using an artificial time formulation, P. Klouček (1–2) 85–109

Stability in structural mechanics
Buckling of multilayered composite plates by natural shear deformation matrix theory, J. Argyris and L. Tenek (1–2) 37– 59

Structural mechanics
A deterministic method to predict the effect of unknown-but-bounded elastic moduli on the buckling of composite structures, I. Elishakoff, Y.W. Li and J.H. Starnes, Jr. (1–2) 155–167
Improving condensation methods for eigenvalue problems via Rayleigh functionals, K. Rothe and H. Voss (1–2) 169–183
A variational method for finite element stress recovery and error estimation, A. Tessler, H.R. Riggs and S.C. Macy (3–4) 369–382

Subsonic flow
Unconditional stability and long-term behavior of transient algorithms for the incompressible Navier–Stokes and Euler equations, J.C. Simo and F. Armero (1–2) 111–154
An a posteriori error estimate for finite element approximations of the Navier–Stokes equations, J.T. Oden, W. Wu and M. Ainsworth (1–2) 185–202

Supersonic flow
Physical and computational aspects of chemically reacting hypersonic flows, J. Argyris, I.St. Doltsinis, H. Friz and J. Urban (1–2) 1– 35

Systems of linear and nonlinear simultaneous equations
Edges, stars, superedges and chains, R. Löhner (3–4) 255–263
A new approach to minimising the frontwidth in finite element calculations, C.C. de Souza, R. Keunings, L.A. Wolsey and O. Zone (3–4) 323–334

Thermal effects and thermodynamics
Studies on ceramic coatings. Deduction of mechanical and thermal properties from the microstructure of the material, J. Argyris, I.St. Doltsinis, M. Eggers and R. Handel (3–4) 203–234
Efficient analytical integration of symmetric Galerkin boundary integrals over curved elements: Thermal conduction formulation, C. Balakrishna, L.J. Gray and J.H. Kane (3–4) 335–355

Transonic flow
Numerical results and stability analysis for the computation of the transonic flow problems using an artificial time formulation, P. Klouček (1–2) 85–109
Recent developments in the algebraic multiblock method for Euler equations, A.E. Kanarachos, N.G. Pantelelis and C.G. Provatidis (3–4) 235–254

Viscous flow
Physical and computational aspects of chemically reacting hypersonic flows, J. Argyris, I.St. Doltsinis, H. Friz and J. Urban (1–2) 1– 35
Finite element methods for parabolized Navier–Stokes equations, Y. Bourgault, P. Caussignac and L. Renggli (3–4) 265–282
Optimal low order finite element methods for incompressible flow, D. Silvester (3–4) 357–368
